

# MID-YEAR 2020 OFFICE MARKET REPORT CHICAGO SUBURBS

### DESPITE STANDSTILL, SUBURBAN OFFICE MARKET SHOWS SIGNS OF LIFE

During Q1/20, Chicago's suburban office market appeared to continue the previous year's momentum with over 1.3 million s.f. of leasing transactions completed. Then Covid-19 hit, and the market's course was substantially altered, causing leasing and sales activity to come to a virtual halt. As a result, the second quarter posted only 569,000 s.f. of leasing transactions. From year-end 2019 to mid-year 2020, direct vacancy and availability rose from 19.55% to 20.56% and 24.16% to 24.73%, respectively. Due to an increase in the availability of Class A product, overall direct gross asking rents increased from \$24.73 p.s.f. to \$25.03 p.s.f. The second quarter's 77,400 s.f. of positive absorption marginally softened the first quarter's nearly 500,000 s.f. of negative absorption, leaving the mid-year to post 422,822 s.f. of negative net absorption in total.1 Impacted by the shelter-in-place order, in May, Bosch moved into only 76,000 s.f. of the 110,000 s.f. it leased back in November 2019. In contrast, Sonova entered a new 64,000-s.f. lease at 750 N. Commons in Aurora in January and took occupancy of 100% of the premises in June.

The Northwest and Northern submarkets continued to lag the East/ West Corridor and O'Hare submarkets with higher vacancy and negative net absorption numbers. In particular, the northern suburbs' direct vacancy was adversely hit by Horizon Therapeutics vacating its 190,000 s.f. of leased space in Lake Forest to become the owner-occupier of the former Takeda Pharmaceuticals Campus in Deerfield. In addition, Mondelez vacated 60,000 s.f. in Deerfield to relocate its operations to Fulton Market.

#### Predicted Impacts of COVID-19 on the Office Market

Leasing activity and rates. The second quarter saw over 80% of its leasing activity occur within Class B assets, and we expect this trend to continue. Tenants under 5,000 s.f. will drive demand for move-in ready spaces with three- to five-year terms. Due to the economic uncertainty created by the pandemic, we see larger tenants renewing at an above-average rate — either for shorter terms or on a long-term basis through blend-and-extend deals to generate immediate cost savings.

Investment sales. The largest office sales transactions (by RSF and price PSF) during the first half of 2020 closed in February. Horizon acquired the former Takeda Campus (660,000 s.f. at \$174 p.s.f.), and Arch Street purchased the Sysmex Corporate Center (162,739 s.f. at \$283 p.s.f.) in Lincolnshire. While sales were scarce during Q2/20, a handful did close, including 4255 Meridian Pkwy in Aurora and 709 Enterprise in

Oak Brook. To gauge Covid-19's lasting impact on the utilization of office product, we foresee buyers and sellers more closely analyzing tenants' financial wherewithal, as well as their likelihood of needing office space when their leases expire.

Suburban resurgence. Once the shelter-in-place order was lifted during the second quarter, activity picked up in the suburbs as tenants displayed a demand for spacious, prebuilt suburban offices in low-rise properties featuring ample parking lots, generous lobbies, and sparsely populated elevators. As an indicator of a market's health, we saw the CBD sublet availability rates climb from 1.90% in year-end 2019 to 2.47% in midyear 2020. In the suburbs, however, the sublet availability rate ticked up only 0.04% between Q4/19 and Q2/20 from 1.94% to 1.98% (see BYTHE NUMBERS). We anticipate the hub-and-spoke operations model (Loop HQ, suburban satellite office) will increase in popularity, with the Eastern E/W Corridor and O'Hare submarkets — both transportation centers — continuing their leads on office demand.

<sup>1</sup> Current and historical property data were compiled from CoStar with these parameters: 20,000 square feet or more; representative cities within each submarket; and Class A and B, existing and under renovation office property type, excluding non-conforming and owner-occupied properties. Absorption numbers are calculated using currently reported square footage in CoStar, standardized over the last four quarters
